## **Driving Your Success**

### **Reduced Hospital Admissions**

Partnering with VNS Health means your patients can have in-home care from physicians, nurse practitioners, and other advanced practice clinicians.

## **Improved Clinical Outcomes**

Improved clinical outcomes, such as reduced inpatient and ED events, which help meet compliance-related quality measures.

## **Improved Quality Measures**

Because VNS Health can provide more services in the home, we can close the gaps in care that affect your quality measures.

## **Higher Customer Satisfaction**

Regular contact from our care managers and an appropriate level of care mean your members can stay in their homes – safely and with the services they need.

## **Lower Total Cost of Care**

VNS Health has provided community-based care for generations. We can help you identify partners to build a network of community-based services and manage those vendors.

## **Increased Appropriate Patient Care**

Proprietary analytics, including AI and predictive algorithms, allow us to identify changes in your members' health early, and our suite of care management solutions provide seamless transitions.

## **Expertise in Complex Care Management**

VNS Health offers care management and managed service solutions that help you close performance gaps and manage medically complex populations, from acute settings through end-of-life care. Our most popular solutions include:

- **Transitional Care Management**

Focusing on members recently discharged from an acute-care facility at high risk for readmission. VNS Health manages medical, social, and behavioral factors that influence

post-acute recovery.

- **Complex Care Management**

An intensive, longitudinal, integrated approach to care that addresses the clinical and psychosocial needs of high-risk, medically complex members over time, working with your existing network partners.

- **Palliative Care Management**

Uses a predictive algorithm to identify patients who would benefit from palliative care, focusing on chronic symptom management and maintaining quality of life.

- **Hospice Benefit Management**

Designed to increase patient access to hospice services and improve coordination between hospice providers and other clinicians at the patient's end of life.
