Behavioral Health Post-Acute Transitions

## Behavioral Health Post-Acute Transitions

Early intervention and long-term solutions designed to interrupt the cycle of inpatient and emergency readmissions for people with chronic and complex behavioral health conditions.

# Behavioral health care solutions to treat the whole person

VNS Health administers long-term multidisciplinary care and treatment, at increasing levels of intensity, to meet people wherever they are in their mental health or substance use recovery journey.

We aim to reduce overreliance on inpatient and emergency services and to improve overall health outcomes, through the rapid deployment of integrated, needs-based clinical support and resources.

[Learn About Post-Acute Transitions](#)

## **Level 1: Behavioral Health Community Transitions**

Supporting and stabilizing individuals transitioning home following an acute behavioral health episode (1–30 days).

[Learn More](#) →

## **Level 2: Community Transitions with Care Management**

Integrated behavioral health care with heightened support, including medication management and help with social determinants of health (3–6 months).

[Learn More](#) →

## **Level 3: Intensive Care Management and Treatment**

Extensive, multidisciplinary care and clinical resources to address complicated and chronic mental health and substance use conditions (6–12 months).
